

**INTRODUCING  
Adams  
Pure Natural  
Spring Water**

**ADAMS PURE NATURAL SPRING WATER** is sourced from artesian springs that rise naturally to the surface in an untouched pocket of paradise high in the foothills of the majestic Adirondack Mountains. They sit amidst 2000 acres of protected wilderness with spring fed lakes and streams nearby. Like an underground river, the water flows from the mountains through two aquifers that are between 500 million and 1 billion years old. This is where natural filtering occurs, deep underground. It surfaces at a constant 42 degrees and it never needs artificial filtration, purification or fortification. Quite arguably it is the purest water you will ever find.

**Adams water is sustainable and eco-friendly.** Only a portion of the water flowing from just five of the 20 springs on this private preserve is used. One could tap 600,000 gallons daily from just these five artesian wells. But they don't. What is not bottled continues to flow into the pristine Black River. Nature performs undisturbed.

**Our new age bottles and caps use 60% less plastic than most.** They are BPA free and 100% recyclable. Because all bottles are manufactured on site, they don't need to be trucked in. Most importantly, we don't have to tanker water in like so many others do. We are very proud to leave such a small carbon footprint!

Adams Water is pure and simple:

- sodium free
- high in calcium
- bromate free
- exceptionally good pH balance

This all makes for a healthy, truly natural spring water with a refreshing, pure taste.

Bottled by our partners  
Alder Creek Beverages, Forestport, New York
